**Subject:** 3.6ghz Consultation  
**Attachments:** 36ghzconsultation.pdf

**Follow Up Flag:** Follow up  
**Flag Status:** Flagged

**Categories:** Red Category

My apologies for being slightly late on this submission. This is being sent on behalf of the Manx ICT Association which represents currently some 34 IT and Associated organisations on the Isle of Man. These consultation comments were distributed to the 88 individual people registered within our corporate membership

### Licensing Spectrum

- Overall seems very sensible and common sense approach
- Agree with the redistribution in the spectrum range to create the available slots and the number of slots allocated
- Agree with the imposition of a two year “use or lose” clause however, the current process that is defined is focussed on a “sale” of assets as one job lot. This actually encourages getting one and holding onto it “just in case”. Also if one were relinquished how could this be reallocated? There does need to be a parallel definition of how to acquire one single slot, if it is available, as an ad hoc process on demand and, there should be a part of the purchasing process that predefines intent, to prevent “squatting”
- Agree with creation of a £3k local licensing fee
