Information

**This information is given for general guidance only.
Further details may be obtained from the Planning and Projects Office.**

Communication Pipes

The legal definition of a communication pipe and a supply pipe are given in the Water Act 1991 and in the Water Byelaws 1989. In most cases, the communication pipe is part of the service pipe which runs under the Public Highroad (including the footpath) to the boundary of the road in which the water main is laid. The supply pipe is the part of the service pipe which is generally within the boundary of the property. The Authority is responsible for the maintenance of the communication pipe but not the supply pipe.

Existing Mains

If a connection is required from an existing main running past the site, the plumber/builder/developer must complete the Application Form "A" and pay the fixed charge of £_____ per connection. The Authority will provide a stop tap within 1.5 metres of the boundary of the road/property.

Before the Authority commences work, the builder/plumber must lay the supply pipe in a trench the correct depth to the boundary of the road. The Authority is responsible for all excavation, backfilling and reinstatement in the public highroad (unless prior arrangements have been made) and will provide a Boundary Box (stop tap) as near to the boundary between the road and property as practicable.

New Estates

The charge of £_____ per connection on new housing estates includes the estate mains and the communication pipe to each plot. However, all excavation and backfilling has to be undertaken by the developer. Normally, the connections, communication pipes and boundary boxes are installed whilst the mains are laid in positions agreed between the developer and the Authority. If it is not practical to install the boundary boxes because of the chance of being damaged by machinery on site, or if the developer is unable to agree where the connection is to be installed (because the building has not been designed), the Authority will return to the site at a later date to install the fittings provided that the developer excavates down to the main at the position required and backfills the trench on completion of the Authority's work.

When a builder pays for a water supply to a plot on a new estate, he must excavate a trench and lay the supply pipe but leave the trench open until the work has been inspected. The Authority will then connect the supply to their boundary box.

Building Water Connections

If a builder does not wish to install a permanent water supply to a site to begin with, but wishes to use a temporary supply, he must pay a charge of £_____ and complete the Application Form "A". The builder must then excavate a trench from the boundary of the plot not less than 0.6 metres deep. He must provide a strong wooden post with either a bib-tap or stop tap securely fixed to it with sufficient length of pipe attached to reach the Authority's boundary box or stop tap.

If at a later date, the builder wants to use this supply as a permanent supply to a plot, he must seek the approval of the Authority.

Building Water

The charges of £_____ for a new connection to an existing main and £_____ for a connection and estate main in new estates includes the charge for building water. In all other cases, the scale of charges for building water will apply.

VAT

VAT is chargeable on connections. The standard rate of VAT (17.5%) is used on all connections other than on New Development which is zero rated. Alterations and refurbishment are charged at 5%.
