Note:- The annual average inflation rate is the change in the annual average index from the year before. This need not be the same as the average of the inflation rates for January to December but in practice the difference is small.

ISLE OF MAN INFLATION METHODOLOGY

METHODOLOGICAL NOTES

Inflation measures the increase in the cost of living, expressed through the prices paid for goods and services by an average household.

A "basket" of goods has been compiled based on the results of the Household Income and Expenditure Survey 2013. The relevant importance of each item is taken into account by weighting products according to the average expenditure on each.

Combining the movements in all the prices together results in an index value and movements in that index value represent an inflation rate; usually expressed as a percentage increase over the previous year. For example, if an annual rate of inflation is given as 5%, then this means something like: "over the last 12 months, the total cost of goods and services consumed by the average household has increased by 5%".

Currently in the Isle of Man, around 1,000 prices are collected for some 500 items. These prices are collected by the staff of Statistics Isle of Man by a combination of: mailing out forms to be filled in by participating businesses, personal visits to premises, telephone contacts, and browsing online shopping sites. Approximately one hundred retailers and other organisations help by either supplying price information or allowing access to their premises. Prices are collected on the 17th/18th of every month (or the nearest working day if this falls on a weekend).

Change to the calculation of the Retail Price Index

As announced in January 2018, April 2018 was the first month where the methodology for the Retail Price Index changed.

The change to the Retail Price Index relates to the formula which is used to create the index, which has changed from the Carli formula to the Jevons formula. This is the same formula which is used in the creation of the Consumer Price Index. However the basket of goods and services and the weightings used in the Retail Price Index will remain the same.

In order to enable comparisons with the United Kingdom's RPI, the necessary data can be sourced from the link below, from Table 1 and Table 5.
