British Nursing Index Search >

British Nursing Index is a leading database for support of practice, education, and research for nurses, midwives, and health providers in the UK or following UK practice. It provides references to literature in the most relevant nursing and midwifery journals. Also included are relevant nursing articles from selected medical, allied health, community and health management journals. Coverage is mainly titles published in the UK, plus a selection of important international nursing titles.

ProQuest Medical Library Search >

This database is a comprehensive collection of journals covering clinical and biomedical literature.

Want to Learn More?

Try one of these options:

- Search the online Help.
- Learn about search syntax changes in the new ProQuest.
- Discover answers to common questions at ProQuest's Product Support Center.
- Got an uncommon question? Contact our Customer Support Team.

Search tip

By default, we will look for documents with all the terms entered.

Use "quotation marks" to search for exact phrases. Separate terms with OR to find any of the words entered.

You also have access to:

The following databases will open in a new tab or browser window

Update

Enter a specific date range

You are now presented with a new set of results but what is useful is that ProQuest

also presents you with a bar chart so that you can see at a glance when the majority of your references were published.

The screenshot shows a search results page for 'fluid balance'. The results are narrowed by 'Publication date: 2007-2011'. A list of four articles is displayed, each with a preview icon and a 'Preview' button. To the right, there is a 'Sort results by:' dropdown set to 'Relevance' and a 'Sort' button. Below that, a 'Narrow results by:' section includes checkboxes for 'Author', 'Publication title', 'Subject', and 'Publication date'. The 'Publication date' checkbox is checked, and a bar chart shows the distribution of publications from 2007 to 2011. The chart has five bars of varying heights, with the tallest bar representing the year 2007. An 'Update' button is located below the chart.

Another way to refine your search is to choose publication title. This displays your search items in a particular journal.

The screenshot shows a search results page for 'fluid balance'. The search bar contains 'fluid balance' and a search icon. Below the search bar, there are options for 'Peer reviewed' and 'Modify search | Tips'. The results are narrowed by 'Publication date: 2007-2011'. A list of four articles is displayed, each with a preview icon and a 'Preview' button. To the right, there is a 'Sort results by:' dropdown set to 'Relevance' and a 'Sort' button. Below that, a 'Narrow results by:' section includes checkboxes for 'Author', 'Publication title', 'Subject', and 'Publication date'. The 'Publication title' checkbox is checked, and a list of journals is displayed: 'Nursing Times (8)', 'Nursing Standard (7)', 'Journal of PeriAnesthesia Nursing (4)', 'British Journal of Healthcare Assistants (2)', and 'Journal of Renal Care (2)'. There is also a 'More options...' link. Below the list, there are checkboxes for 'Subject' and 'Publication date' with a 'Clear' button.

Yet another way to refine your search if you get lots of results is to use the **search within** feature.

Update

In this example choose email.

Complete the relevant details and don't forget to choose which referencing style you want your saved items to appear in.

If you do not want the saved items to appear in your next search you must tick **deselect items when done**.

Click **send email** and you will receive a confirmation.

Click close and you are ready to start a new search.

If you conduct a search and need to keep up to date you can create an alert.

The screenshot shows the ProQuest British Nursing Index search results for the term 'homeostasis'. The search bar contains 'homeostasis' and a search icon. Below the search bar, there are options for 'Peer reviewed' and 'Modify search | Tips'. The results section shows '59 Results *' and a 'Search within' dropdown. There are buttons for 'Create alert', 'Create RSS feed', and 'Save search'. Below the results, there are options for '0 Selected items [Clear]', 'Save to My Research', 'Email', 'Print', 'Cite', and 'Export/Save'. The results list includes two items: 'Homeostasis, part 1: homeostasis versus homeodynamism' and 'Short-term regulation of acid-base homeostasis of body fluids'. On the right side, there is a 'Sort results by:' dropdown set to 'Relevance' and a 'Sort' button. Below that, there is a 'Narrow results by' section with checkboxes for 'Author' and 'Publication title'.

Enter all relevant details as below, specify the regularity of your alerts and send.

The screenshot shows the 'Create alert' form in ProQuest. The form is divided into four steps: 'Step 1-Review search details', 'Step 2-Define your alert email', 'Step 3-Define your alert content', and 'Step 4-Schedule your alert'. In Step 1, the search term is 'homeostasis' and the databases are 'British Nursing Index' and 'ProQuest Medical Library'. In Step 2, the 'Send to:' field is empty, the 'Subject:' is 'homeostasis', and the 'Format:' is 'HTML'. In Step 3, 'Include search details:' is 'No', 'Include highlighting:' is 'Yes', and 'Include:' is 'Newly published documents only'. In Step 4, the 'Send:' frequency is 'Monthly' and the 'Stop after:' duration is '2 months'.

Another useful feature is **cite**.
