

Example Manure Management Plan

This plan is what is required as a minimum.

What is a Manure management plan?

A simple Manure Management Plan will help identify when, where and at what rate to spread manures, slurry, dirty water and other organic wastes. Producers will benefit while minimising the risk of causing pollution. It will also help producers assess whether they have enough storage.

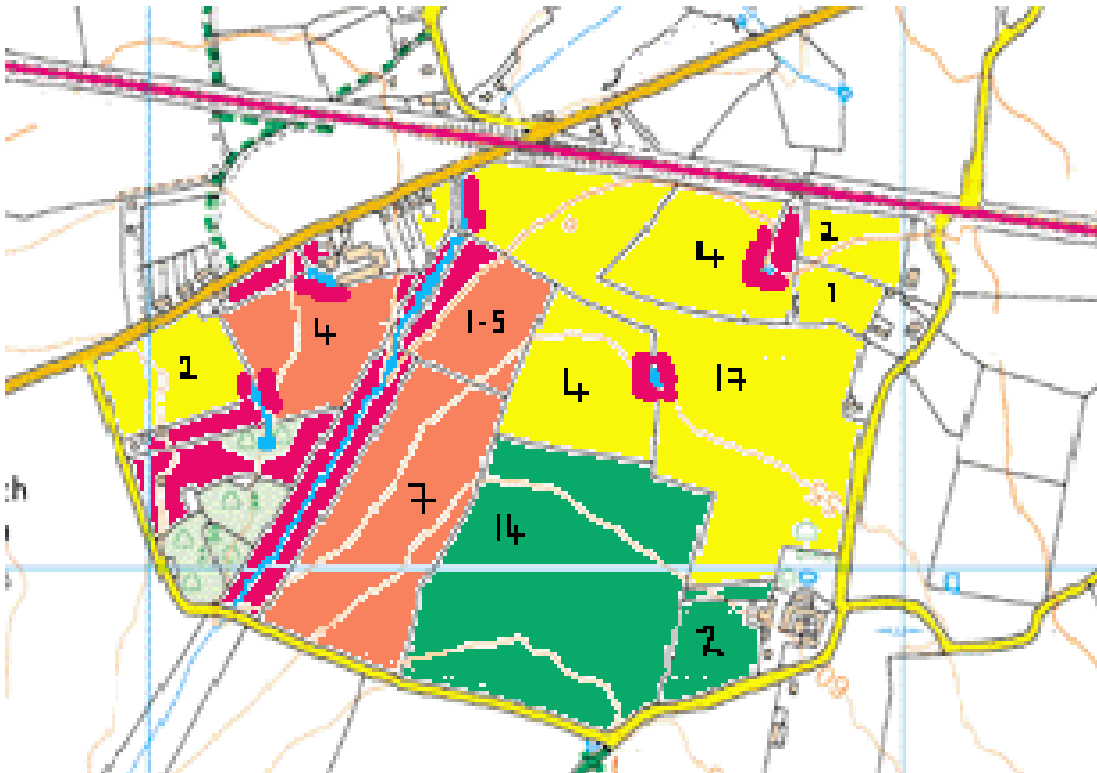

What is required by the Standards?

As a minimum producers will be expected to have a map of the farm identifying where and when Manure can be applied and demonstrating that there is enough land area available for manures to be applied without exceeding a Total Nitrogen application of 250kg/ha/year (100kg/acre).

How?

Step 1 : Map - begin with a map of the farm.

“Lower Farm”

Not to Scale
