1. Analysis of the Residential Land Availability Study Update 10	13

Understanding the Update:

Minor edits - e.g spelling, punctuation have not been noted as long as the context of the sentence remains unaltered.

Red text- Is direct replacement of text, new text or updated figures using the latest data

Footnotes – These include new sources and notes on previous figures.

1. Introduction and Settlement Hierarchy

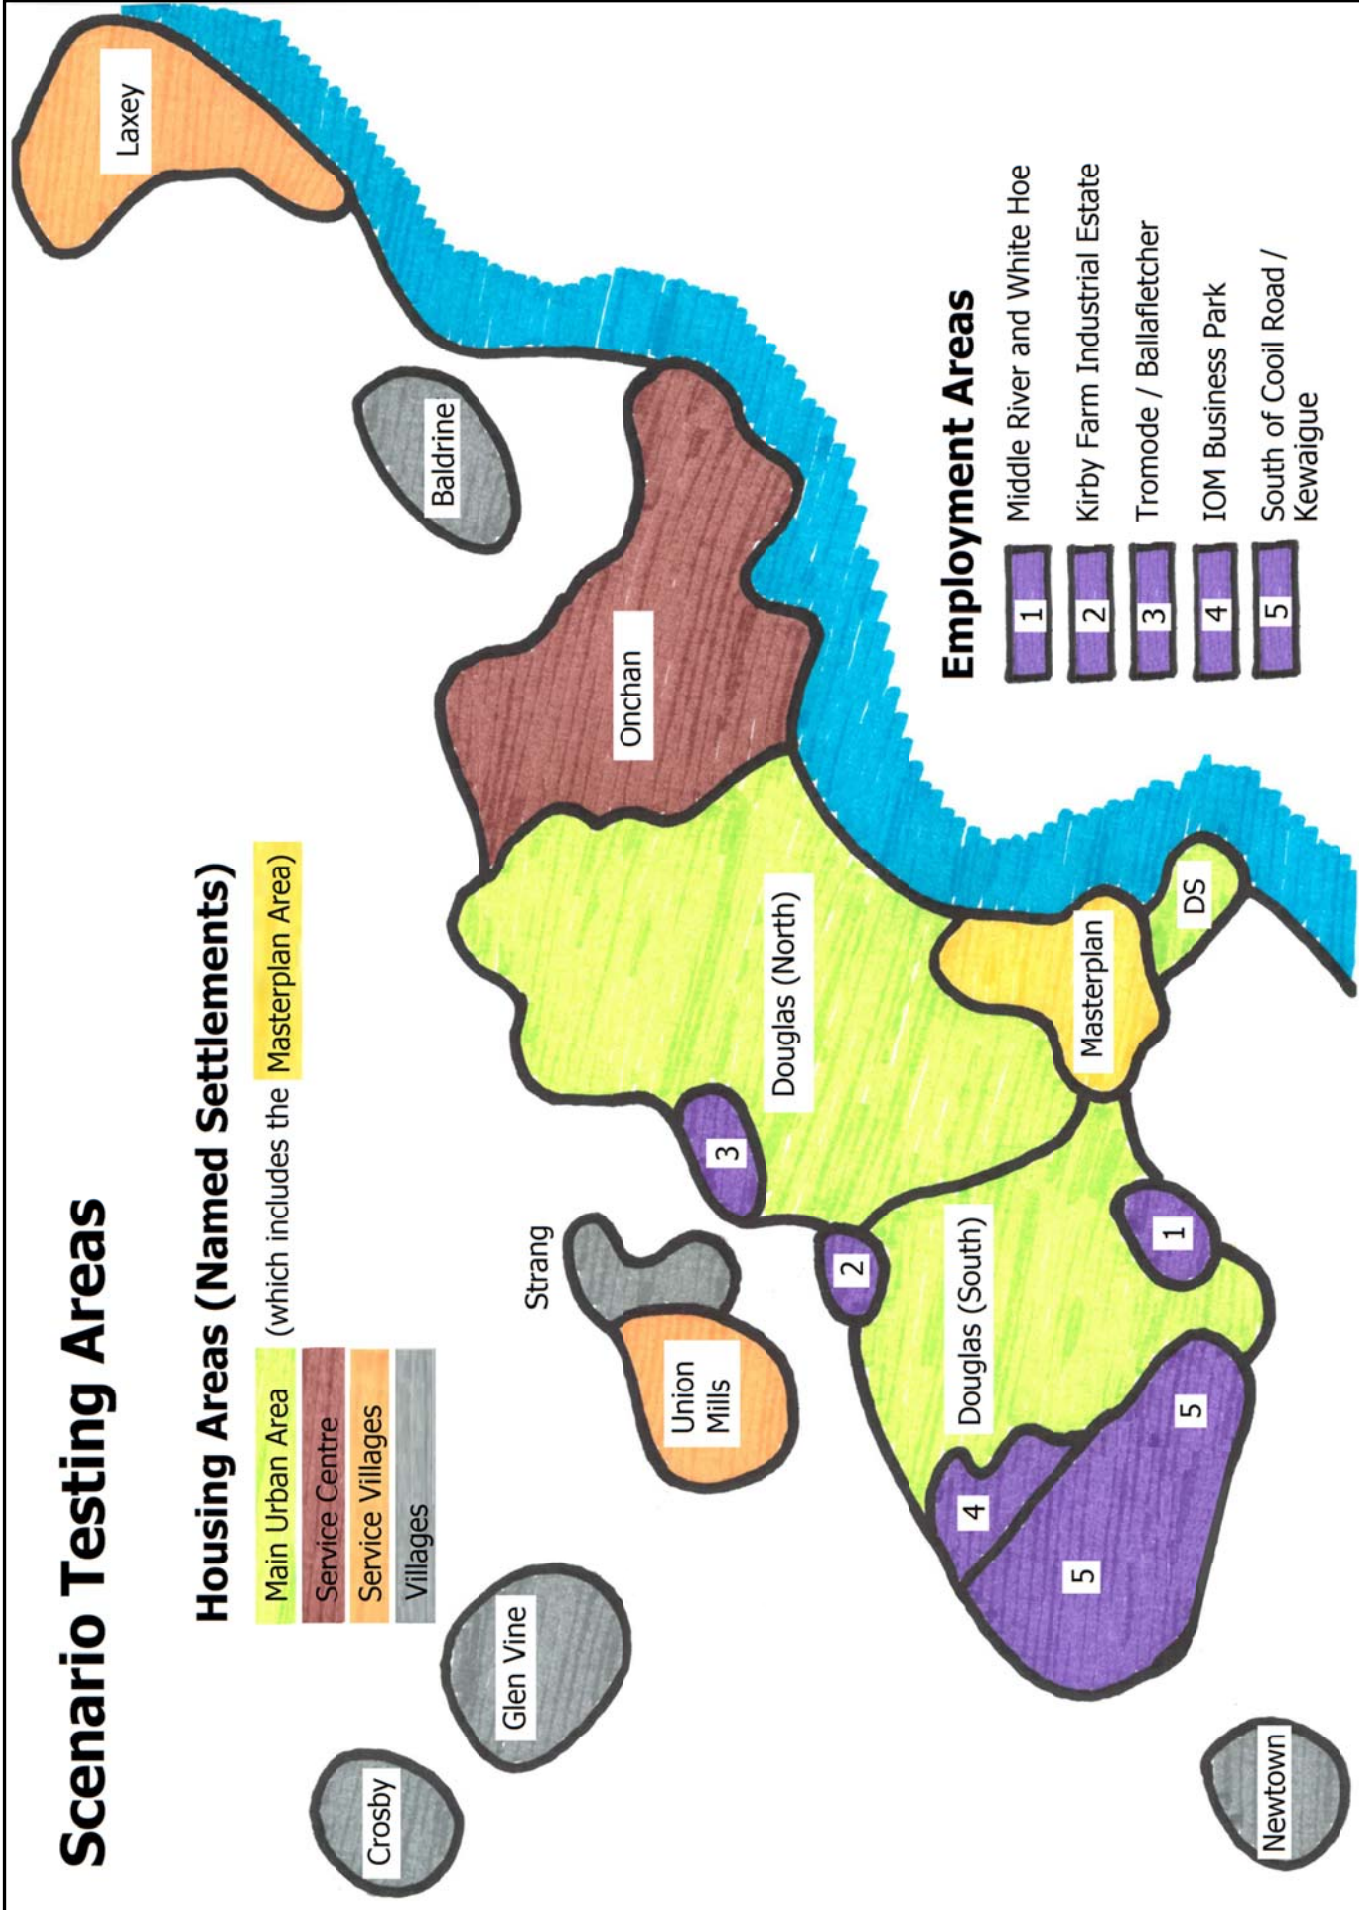

- 1.1 The Strategic Plan was approved by Tynwald in 2016. It sets out the broad level and pattern of development (including housing need figures and settlement hierarchy). The Area Plan for the East is intended to provide the detailed proposals and land allocations to deliver the Strategic Plan.
- 1.2 The Strategic Plan sets out a housing need figure for the Island and a distribution of housing numbers to the settlements set out in the settlement hierarchy.
- 1.3 The Strategic Plan does not include specific land requirements for Employment Land, therefore the Employment Land Review findings provides the evidence base for employment land (manufacturing, distribution/warehousing, industrial, office).
- 1.4 In order to 'test' different approaches to the broad pattern of development, 3 scenarios were developed and assessed (using broad Scenario Testing Areas drawn from the Settlement Hierarchy) – the results being published to inform the Preliminary Publicity consultation which took place in 2017 (see map overleaf).
- 1.5 A draft conclusion was reached for every potential site – informed by a bottom up assessment of the quality of the site and a top down assessment of required development land to meet the needs made from the Strategic Plan projections **and DP EP 5**.
- 1.6 Internal steps included consultation with:
 - With the Department for Enterprise - An employment demand and supply note (which sets out how we have identified the employment target, which sites will be proposed for allocation and the extent to which each site will contribute to delivery of the employment land target).
 - The Strategic Asset Management Unit - The proposed allocation for the 31 Government Owned Sites which have been considered.
 - With providers of social, green and grey infrastructure – To clarify whether the distribution proposed in the Draft Plan highlights any concerns – drawing on the previous scenario testing work (this is to be based on the net yields for housing and employment plus two larger employment sites for other uses).
- 1.7 At the same time as the above, the Department of Infrastructure (Highways Division) was be asked to carry out detailed modelling of the potential site allocations.

Scenario Testing Areas

Housing Areas (Named Settlements)

Main Urban Area (which includes the Masterplan Area)

- Service Centre
- Service Villages
- Villages

Employment Areas

- 1 Middle River and White Hoe
- 2 Kirby Farm Industrial Estate
- 3 Tromode / Ballafletcher
- 4 IOM Business Park
- 5 South of Cooil Road / Kewaigue

2. Potential Development Sites and Assumptions

2.1 254¹ potential development sites have been considered:

- 34 for Employment uses
- 191 for Housing uses
- 24 for Mixed uses
- 5 for Other uses

2.2 One site has been deemed withdrawn due to lack of information (no map). 37 Sites have been classed as Category 1 in the Site Assessment Framework (no detailed assessment required – wash over reflecting surrounding land use). Therefore, 216 have been considered in more detail.

2.3 However, the following sites had multiple options and this has necessitated 17 additional assessments:

- BE005 (2 options)
- BE006 (4 options)
- DM013 (2 options)
- GH014 (4 options)
- GM001 (4 options)
- MH027 (2 options)
- MM002 (2 options)
- OH002 (2 options)
- OM002 (2 options)
- SH007 (3 options)

2.4 There have therefore been 233 assessments of the 216 sites. The conclusions for the 216 sites are:

- Over 65 sites have been identified as Countryside sites and so not proposed for allocation (although some are being considered as potential Groups of Houses in the Countryside); and
- Over 70 sites, largely within the existing settlement boundaries or adjacent to them have been proposed for allocations.

Assumptions

2.5 In calculating the potential net 'yield' of sites the following assumptions have been made.

¹ 2 additional housing sites were received. These were after the publication of the draft plan and appear in the all sites table under the code LATE#. These sites were either assessed as not suitable or to be subsumed into a larger site development but not developed in isolation.

Table 1: Potential Development Site Yield Calculation Assumptions

Issue	Top Down Assumptions
<p>Developable Area: A net developable area needs to be calculated for each site (to discount strategic landscaping areas, larger roads etc.)</p>	<ul style="list-style-type: none"> • If under 3 ha then assume 100% (unless constrained site in which case reduced %) • If 3 – 10 ha assume then assume 80% • If over 10 ha then assume 70%
<p>Probability of Development: Not every site that is allocated will be brought forward (around 87%² of planning approvals in the East are implemented, 73% including lapsed). Even if sites are commenced, they may not be built out in the plan period (especially if larger sites)</p>	<ul style="list-style-type: none"> • If Strategic Reserve then assume 0% • If employment and developable area under 0.35 ha then assume 0% • If Housing, Employment or Mixed Use and under 3 ha (but more than 0.3 if employment) then assumed 80% • If Housing, Employment or Mixed Use and 3 – 10 ha assume then assume 70% • If Housing, Employment or Mixed Use and over 10 ha then assume 60% • If existing use which would need to cease have assumed 0% (unless clear evidence may do so) • If significant delivery concerns then assume 10%
<p>For housing sites - % of Site Developed for Housing: Areas of site may be developed for other uses, for example neighbourhood shopping areas.</p>	<ul style="list-style-type: none"> • If a Mixed Use Site assume 50% • If under 3 ha then assume 100% • If 3 – 10 ha then assume 90% • If over 10 ha then assume 80%
<p>For housing sites - Housing Density: As set out in the SAF, not all housing developments are at the same density (<i>Note: Net Housing density includes housing and directly associated uses and excludes major distributor roads, primary schools, open spaces serving a wider area and significant landscape buffer strips</i>)</p>	<ul style="list-style-type: none"> • Within Douglas Masterplan Area (or close to) assume 100 dph • Douglas North or Douglas South, within ESB and under 3 ha assume 40 dph • Onchan assume 28 dph • Not in above assume 20 dph
<p>For employment sites – does the proposed use contribute to a use which has been included in the calculation of the demand figures (e.g. Car Show Rooms not a relevant ‘type’ of employment, a Technology Park is a relevant type of employment but would result in increased demand over and above that set out in ELR)</p>	<ul style="list-style-type: none"> • % Employment use is shown as 0 if not responding to ELR.

² 84% in 2018 edition of DP EP3

3. Housing Supply

Residual Target

- 3.1 An annual Residential Land Availability Study (RLAS) is carried out which records planning approvals for residential development and records the take-up of those approvals (i.e. whether they have been implemented).
- 3.2 Although the Plan Period runs on financial years (1st April - 31st March) the RLAS study period covers 1st July – 30th June. However, it is considered that this makes negligible difference to the overall results. Due to the time taken to produce the study, there is a lag-time and so the latest study to be published is **RLAS Update 11 which covers the period up to the end of June 2018 and so represents the first seven years of the 15 year Plan Period set out in the Strategic Plan.**
- 3.3 In light of the above, the data within RLAS11 has been used in relation to the period 1st July 2011 – 30th June 2018. Planning Approvals (including conversions) have been identified within this time period which, based on the information within RLAS11, are either completed or have commenced and have less than 3 plots remaining.
- 3.4 These planning approvals are counted as dwellings that have already been built in within the plan period and so reduce the number of units which need to be provided over the remainder of the plan period (see Table 2).

Table 2: Dwellings that have been built since 2011 (RLAS Update 10 & 11)

Local Authority Area	Dwellings completed/ started on site RLAS 10	Dwellings completed/ started on site RLAS 11
Braddan	10	39
Douglas	139	148
Garff (Laxey and Lonan)	29	25
Marown	4	38
Onchan	12	12
Santon	2	8
TOTAL	196	270

NB. Amendments to planning applications can cause a small drop in take up figures

- 3.5 Therefore, the **residual housing need is 2,170** units based on:-
- the Strategic Plan identifies a need in the East of 2,440 units; and
 - **270** units have been completed or commenced on site.

Affordable and First Time Buyers Housing Need³

- 3.6 Between January 2011 and June 2019, there were 225 first time buyers houses completed Island wide. Of the 225 built, 170 were sold to First Time Buyers; the unsold remainder of 55 were sold to Local Authorities or by the developers in the open market and Commuted Sums paid.
- 3.7 The Island wide First Time Buyers waiting list has 110 active registered interests, 82% of these have a preference for Douglas and the East. At the time of publishing this paper there are 28 interested parties in a position to buy.
- 3.8 Using past figures as a guide to future need and using the same forecasting methodology as the Residential Land Availability Study (Units Built ÷ Years Past X Years Remaining), the Department of Infrastructure could theoretically deliver approximately 199 units until the end of the plan period in 2026. 163 units of these would ideally be within Douglas and the East.
- 3.9 Between January 2011 and June 2019 there were 132 First Home Choice sales completed. Of the 132 sales, 81 were within Douglas or the East which represents 61% of the total.

Original Scenario Testing Potential Development Sites (May2018)

- 3.10 Potential sites to accommodate 4,762 dwellings have been identified, with potentially **2,408 after adjustment**.
- 3.11 It should be noted that of the 2,408:
- 658 Housing units on the Category 1 and 2 Potential Development Sites would be on brownfield sites (this is due to the deliverability concerns associated with some sites and also that some brownfield sites will contain a significant element of non-residential development – e.g. the Lord Street site).
 - 2,130 would be outside areas identified as at risk of flooding.
 - 964 would be within Existing Settlement Boundaries.
 - 2091 would be within the Active Travel strategy's 2.5 mile radius
 - A theoretical maximum of 504 affordable housing units could be delivered through the Area Plan.

Potential Development Sites going into public inquiry (Revised housing figures – All Sites List - June 2018 column)

- 3.12 1836 dwellings have been identified with **1716 after adjustment⁴**.
- 3.13 Of these 1716 it should be noted that:
- All 658 Category 1 and 2 Potential development sites on Brownfield land continue to form part of the land supply going into public inquiry. This represents 38% (Adjusted figure).
 - No Brownfield sites are to be held in Strategic Reserve.
 - 1058 potential dwellings on Greenfield land (62%)
 - 120 potential dwellings held in Strategic Reserve (7%).
 - Theoretical maximum of 411 Affordable Homes could be delivered through the Area Plan.

³ Figures provided by the Department of Infrastructure Housing Division.

⁴ See All Sites Table DP EP1 and Table 3

Note: The unadjusted figures include the capacity of Strategic Reserve Sites.

Additional Supply

3.14 The Existing Housing Supply comprises:

- dwellings (excluding conversions) that have planning approval, have not yet been built and fall below the threshold to be considered as Potential Development Sites; and
- a projection for future conversions over the remainder of the plan period.

3.15 Based on the information set out in the remainder of this section, additional flexibility has been identified in terms of a potential 'existing supply' which could comprise:

- 195 remaining approvals on sites not considered as Potential Development Sites (as too small) 73% of which might be expected to be implemented, giving a net figure of 144.
- based on past trends, the possibility of 187 forecast conversions in the East (changes of use to residential).

3.16 RLAS11 includes a projected figure for windfalls from 2018 to 2026 (based on a mean average of the preceding years). Windfall is defined as, "A development on land not specifically identified for housing, for example, on land designated for light industry or for office use". Given the plan provides an opportunity to review the designation of land (and 're-zone' non-housing land for housing), and also to avoid double-counting with any 'remaining approvals' identified within this Chapter, the windfall projection is not included in the existing supply figures.

Dwellings (excluding conversions) that have planning approval have not yet been built and fall below the threshold to be considered as Potential Development Sites

3.17 The Site Identification Report considered a number of sources including RLAS8. However, the following types of approvals were excluded from the Site Identification Report and so can be counted as part of the Existing Housing Supply:

- planning approvals which are not yet taken up (based on RLAS10⁵ & ⁶) and were for less than 3 net additional units; and
- planning approvals which are not yet taken up (based on RLAS10) and are outside of areas allocated in existing development plans for development or identified as predominantly residential (existing) (or equivalent).

3.18 Table 4 shows the planning approvals included in the above plus RLAS Update 11. Sites which have been approved since July 2011 and since expired are not included. This gives an estimate of the number of units 'in the pipeline'. The capacity of sites has been calculated based on net contributions (e.g. the demolition of a dwelling to create 2 dwellings would be a net increase of 1). It is noted that there may be other sites which come forward during the remainder of the plan period for redevelopment or 'backland' development. No projection is made for these and so they would contribute additional supply.

⁵ The Site Identification Report was not updated as it was used to identify sites for the Draft Plan published May 2018

⁶ See Appendix 1 for details. In the interests of clarity and fullness, sites which are allocations, have unimplemented approvals but have not been identified in the Site Identification Report are shown in Appendix 1. These sites are shown with 0 'yield' if approvals pre-date July 2011 or have expired. Sites which have been shown in the RLAS and have not yet been implemented and have been identified as Potential Development Sites are also shown in Appendix 1 but with 0 yield.

- 3.19 Conversions (other than hotels/guesthouses) have been removed from the following calculations in Table 4 because an estimate figure for future conversions is made for the remainder of the plan period (Table 5). Therefore, to include planning approvals for unimplemented conversions which are not hotels/guesthouses would be double-counting.
- 3.20 The results of this exercise are summarised in the table below. RLAS Update 11 identifies an average take-up rate in the East of **73% (including lapsed)**. Therefore of the **195** remaining approvals it is assumed that **144** are taken up (Adjusted Figure)

Table 4: Existing Housing Supply (valid approvals) in the East (RLAS Update 11)

Local Authority Area	Dwellings approved but not started	Adjusted
Braddan	1	1
Douglas	105	77
Garff (Laxey and Lonan)	42	31
Marown	16	12
Onchan	31	23
Santon	0	0
TOTAL	195	144

Projected Conversions

- 3.21 RLAS11 includes a projection for conversions from 2018 – 2026. This is based on a mean average of the conversion figures of previous years divided by the remaining number of years in the plan period. Given the significant number of conversions from hotel/guesthouse to residential, these are excluded from the figures used to calculate the average of the last four years as it was felt that this trend may not continue and so would distort the figures. This gives a total of 186 conversions from 2018 – 2026 within the East. If the completed conversions since 2011 (see Appendix 1) are used to generate the mean (total divided by 17.5 to give 1 year average multiplied by 8.5 – the remaining years in the plan period) this gives the conversion projections for each Local Authority Area as set out in the Table 5, a total of 187.
- 3.22 If this figure is used to calculate total supply as part of the area plan, the yield of any Residential or Mixed Use Potential Development Sites which are conversions (other than hotels/guesthouses) rather than new build would need to be discounted. Proposals which involve an existing building being demolished prior to construction are not counted as conversions. However, if the existing building were residential, a net yield will be used which allows for the loss of existing units.

Table 5: Conversions

Local Authority Area	Projection 2018 - 2026 (8 Years)
Braddan	8
Douglas	122
Garff (Laxey and Lonan)	9
Marown	11
Onchan	29
Santon	8
TOTAL	187

4. Employment Land Need and Supply

4.1 The approach has been informed by the Employment Land Review (2015), Supplement (2017), Site Assessment Work, and Scenario Testing (initially published as part of the Preliminary Publicity in 2017). The important elements of the approach are summarised below:

- The Employment Land Review calculates the demand for employment land (manufacturing, distribution & warehousing and out of town office) from 2014 – 2026 and produces a combined figure for the East and South of 11.24 hectares.
- Significant allocations already exist in the Area Plan for the South, however much of the demand is around Douglas and so it is proposed to allow for 75% of demand to be met within the Area Plan for the East (8.43 hectares)
- This figure does not allow for choice or churn and therefore an element of over-allocation is required, 50% is proposed, giving a figure of **12.65 hectares**

4.2 In determining whether a site contributes towards meeting this demand, the following points should be noted (in addition to the broad assumptions set out in section 2 previously):

- The demand figure runs from 2014, therefore development which has taken place since 2014 'counts' towards meeting the demand.
- The ELR sets out demand figures for office, manufacturing and warehousing/distribution, therefore only development of sites for these uses 'counts' towards meeting the ELR demand. The use of employment land for other uses (leisure car showrooms, waste etc.), therefore sites allocated specifically for such uses should not be counted towards meeting the 12.65 hectares demand figure.

4.3 The following sites have been identified as being developed since 2014, giving a total of 2.88 hectares and a **residual target of 9.77 hectares**.

Table 6: Employment Development Since 2014

Site	Area
BE011	0.47
BE015	0.59
BE021	0.9
BE022	0.1
BE016	0.5 (Part of site)
DE005	0.16
DE008	0.16 (Part of Site)
Total	2.88

4.3 The assumptions behind the employment land supply require further refining, including the proportion of sites which are Strategic Reserves, however work to date suggests a **total potential development of 49.78 hectares, with 13.69 potentially within the plan period**.

- 4.4 The plan period figure does not include a proposed Technology Park (in STA1) which would have a gross site area of 5.23 hectares and be proposed within the Plan. It should also be noted that there has been no review of potential capacity at Snugborough Industrial Estate as the ELR (2015) states that, "The estate is fully developed". However, it is acknowledged that there may be some potential for development within this area, which could provide further flexibility.

Table 7: Employment Land Supply

Scenario Testing Area	Cat 1 PDS	Cat 1 PDS (Adjusted)	Cat 2 PDS within ESB	Cat 2 PDS within ESB (Adjusted)	Cat 2 PDS outside ESB	Cat 2 PDS outside ESB (Adjusted)	Total Supply	Total Supply (Adjusted)
