

Highway Services - Roads Medium & Long Term priorities

Updated : 19/03/21 (TC)

Preface

This document outlines the current road priorities across each type of road on the roads hierarchy. The roads hierarchy is available on the Department's website, and represents the relative importance of roads to the Island's network. More spend proportionally is expected on the more important routes which provide strategic routes for the Island.

This is a working document that is subject to change. Any dates provided are only indicative, roads may be

How do you identify future works?

based on their condition and types of treatment available, and also other factors such as bus routes, racing courses and traffic volumes.

Why are all the high priority works not undertaken first?

Some roads may require more complex works than others. Major undertakings may require a capital bid where it is not possible to fund from the general maintenance fund. For example, roads with underlying concrete slabs that have failed require extensive reconstruction and may require a capital scheme. There may also be other considerations such as other works on the network or future schemes in the same area. Some works may require further investigation or other improvements (such as kerbing or drainage) before they can be

Why is my road not on the list?

We prioritise roads based on the factors identified above against the budget available. Residential roads are prioritised separately through the residential roads refurbishment programme.

Why do you use other methods that do not last as long as full resurfacing?

The most cost effective way to manage our road assets is through using the appropriate solution, which often includes preventative maintenance before full resurfacing is required. This is done through either surface dressing or microasphalt, which seal the surface and protect from water. These treatments are not suitable everywhere, and they require specialist contractors and they are only suitable certain times of year.

Roads Plan - Primary

Highway Services - Roads Medium & Long Term priorities

ed : 19/03/2	Area from	Area to	Leng	Ride quality	Texture	Surface Defects	Other	Possible Treatments			Comments	Priority	Possible Year
								Paver	Microsurfacing	Surface Dressing
