

This patient group direction (PGD) must only be used by registered health professionals who have been named and authorised by their organisation to practice under it. The most recent and in date final signed version of the PGD should be used.

Patient Group Direction (PGD)

For the administration or supply of

Flucloxacillin capsules 250mg and 500mg Flucloxacillin suspension 125mg/5ml and 250ml/5ml

By registered health care professionals for

infected skin wounds

Throughout the Manx Care and those contracted by the Manx Care where appropriate within practice

PGD NUMBER 26

1. Change history

Version number	Change details	Date
1	Original PGD ratified	June 2021
2	Updated dosing regime and minor wording amendments	January 2022

Reference number: 26 Valid from: 01/2022 Review date: 01/2024

Version: 2 Page **1** of **6**

2. Medicines practice guideline 2: Patient group directions

Refer to the relevant sections of NICE medicines practice guideline 2: *Patient group directions* as stated in the blank template notes. For further information about PGD signatories, see the NHS and Manx Care <u>PGD website FAQs</u>

3. PGD development

Refer to the <u>NICE PGD competency framework for people developing PGDs</u>

Job Title & organisation	Name	Signature	Date
Author of the PGD			
Member of the PGD working group			

4. PGD authorisation

Refer to the <u>NICE PGD competency framework for people authorising PGDs</u>

Job Title	Name	Signature	Date
Medical Director			
Chief Pharmacist/ Pharmaceutical Adviser			
Senior Paramedic			
Director of Nursing			
GP Adviser			
Senior Microbiologist (if PGD contains antimicrobials)			

Reference number: 26 Valid from: 01/2022 Review date: 01/2024 Version: 2

5. PGD adoption by the provider

Refer to the <u>NICE PGD competency framework for people authorising PGDs</u>

Job title and organisation	Signature	Date	Applicable or not applicable to area

6. Training and competency of registered healthcare professionals, employed or contracted by the Manx Care, GP practice or Hospice

Refer to the <u>NICE PGD competency framework for health professionals using PGDs</u>

	Requirements of registered Healthcare professionals working under the PGD	
Qualifications and	Registered healthcare professionals, working within or	
professional registration	contracted by the Manx Care, GP practice or Hospice who are	
	permitted staff groups outlined within the current PGD policy	
	Pharmacists must be practising in Manx Care authorised	
	premises i.e. contracted pharmacy premises	
Initial training	Knowledge of current guidelines and the administration of the	
	drug specified in this PGD/BNF and of the inclusion and	
	exclusion criteria	
	Training which enables the practitioner to make a clinical	
	assessment to establish the need for the medication covered by	
	this PGD	
	Local training in the use of PGDs	
Competency	Staff will be assessed on their knowledge of drugs and clinical	
assessment	assessment as part the competency framework for registered health	
	professionals using PGDs	
Ongoing training and	The registered health care professionals should make sure they are	
competency	aware of any changes to the recommendations for this medication;	
	it is the responsibility of the registered health care professionals to	
	keep up to date with continuing professional development. PGD	
	updates will be held every two years	

Reference number: 26 Valid from: 01/2022 Review date: 01/2024

Version: 2

7. Clinical Conditions

Clinical condition or situation to which this PGD applies	Possible skin/wound infection
Inclusion criteria	Possible skin/wound infection
Exclusion criteria	 Penicillin allergy Under ONE year old Porphyria Previous course of flucloxacillin for this episode of infection Non-superficial infection (deep/ulcerated wounds) or suspected bone involvement
Cautions (including any relevant action to be taken)	 Anticoagulants Allopurinol Cytotoxics Valproate Pregnancy and breast feeding Hepatic disorders Cholestatic jaundice may occur, rarely up to two months after treatment has stopped Healthcare professionals are reminded that flucloxacillin should not be used in patients with a history of hepatic dysfunction associated with flucloxacillin; it should be used in caution in patients with hepatic impairment
Arrangements for referral	Patient should be referred to a more experienced clinical
for medical advice	practitioner for further assessment
Action to be taken if	Patient should be referred to a more experienced clinical
patient excluded	practitioner for further assessment
Action to be taken if	A verbal explanation should be given to the patient on: the need for the modification and any possible effects on patients in its
patient declines	for the medication and any possible effects or potential risks
treatment	 which may occur as a result of refusing treatment This information must be documented in the patients' health records Any patient who declines care must have demonstrated capacity to do so Where appropriate care should be escalated

Add expiry date to PRE-packed label
Adult: 500mg Four times a day Supplied: 1 original pack (7 day course) Administered and/or applied Maximum or minimum eatment period Forage Capsules – Store at room temperature Suspension – Store in a refrigerator once reconstituted Reconstitute suspension as directed on the container, shake well to ensure uniform mixing. Add expiry date to PRE-packed label
Supplied: 1 original pack (7 day course) Administered and/or Ipplied Maximum or minimum eatment period Corage Capsules – Store at room temperature Suspension – Store in a refrigerator once reconstituted Reconstitute suspension as directed on the container, shake well to ensure uniform mixing. Add expiry date to PRE-packed label
Administered and/or applied Administered: 1 dose Maximum or minimum eatment period Forage Capsules – Store at room temperature Suspension – Store in a refrigerator once reconstituted Reconstitute suspension as directed on the container, shake well to ensure uniform mixing. Add expiry date to PRE-packed label
Maximum or minimum eatment period • Capsules – Store at room temperature • Suspension – Store in a refrigerator once reconstituted Reconstitute suspension as directed on the container, shake well to ensure uniform mixing. Add expiry date to PRE-packed label
Maximum or minimum eatment period • Capsules – Store at room temperature • Suspension – Store in a refrigerator once reconstituted Reconstitute suspension as directed on the container, shake well to ensure uniform mixing. Add expiry date to PRE-packed label
 Capsules – Store at room temperature Suspension – Store in a refrigerator once reconstituted Reconstitute suspension as directed on the container, shake well to ensure uniform mixing. Add expiry date to PRE-packed label
 Capsules – Store at room temperature Suspension – Store in a refrigerator once reconstituted Reconstitute suspension as directed on the container, shake well to ensure uniform mixing. Add expiry date to PRE-packed label
Suspension – Store in a refrigerator once reconstituted Reconstitute suspension as directed on the container, shake well to ensure uniform mixing. Add expiry date to PRE-packed label
Reconstitute suspension as directed on the container, shake well to ensure uniform mixing. Add expiry date to PRE-packed label
to ensure uniform mixing. Add expiry date to PRE-packed label
(must be stored in a fridge once reconstituted with water). Add
patient's name and date of issue to pre-packed label
dverse effects • diarrhoea
 Hypersensitivity
Nausea
• skin reactions
thrombocytopenia
• vomiting
Hepatic disorders
Cholestatic jaundice and hepatitis may occur very rarely, up to two
months after treatment with flucloxacillin has been stopped.
Administration for more than 2 weeks and increasing age are risk
factors. Manufacturer advises:
flucloxacillin should not be used in patients with a history of
hepatic dysfunction associated with flucloxacillin
flucloxacillin should be used with caution in patients with
hepatic impairment
Careful enquiry should be made about hypersensitivity reactions
to beta-lactam antibacterials
ecords to be kept The administration of any medication given under a PGD must be
recorded within the patient's medical records

Reference number: 26 Valid from: 01/2022 Review date: 01/2024

Version: 2

9. Patient information

Verbal/Written information to be given to patient or carer	 Verbal information must be given to patients and or carers for all medication being administered under a PGD Where medication is being supplied under a PGD, written patient information leaflet must also be supplied
	 A patient information leaflet is available on request
Follow-up advice to be	If symptoms do not improve or worsen or you become unwell, seek
given to patient or carer	medical advice immediately
