Provision of Airports Analytics Solution

GTS-1096

Government Technology Services (GTS), on behalf of the Department of Infrastructure (DOI) are seeking a solution which would enable the Airports Division (AD) to streamline operational efficiencies as well as improve customer service.

The airport has considerable volumes of data but are not currently in a position to use the data to its maximum, therefore enabling the AD to make timely, well informed management decisions. This, in turn, does not allow AD to optimise potential business opportunities.

All of the data comes from various different source systems each with their own reporting outputs. To try and amalgamate information across these different source systems into meaningful management information (MI) report(s) is a cumbersome process. This process also takes up a lot of time meaning some reports are outdated when they are delivered to management. The department is currently overwhelmed by the number of Excel reporting files they have to produce.

An airports analytics solution would enable the AD to streamline operational efficiencies as well as improve customer service. More detailed information is available once you have expressed an interest.
