Disclaimer:

The Isle of Man Government has facilitated the compilation of this document, to provide baseline information towards the Isle of Man Marine Plan Project. Information has been provided by various Government Officers, marine experts, local organisations and industry, often in a voluntary capacity or outside their usual work remit. Advice should always be sought from relevant contacts where queries arise.

The editors have taken every care to ensure the accuracy of the information contained but accept that errors, omissions or changes may be present which may be identified in future. The editors accept no responsibility for the accuracy or currency of information provided on external sites.

All MMEA chapters may be amended and improved upon in light of new information or comments received. As such, all chapters should be considered as working documents.

Any initial guidelines or recommendations within the document are provided to help facilitate future discussions between stakeholders, Government Departments, future developers and the general public, and should be read only in the context of the document as a whole. This document does not provide legal or policy advice but rather a statement of known information about Manx territorial waters.

The mapping detail contained in this document is subject to the limitations of scale and depiction of any feature, does not denote or infer right of way and no claim is made for the definitive nature of any feature shown on the mapping. New marine datasets created for the project have not been subject to formal verification.

Marine Education and Awareness Raising

Introduction

This chapter serves as a brief introduction to marine education and awareness raising in the Isle of Man, including marine industry training opportunities. The Isle of Man has a long history of public marine education, particularly linked to Port Erin Marine Laboratory and the Island’s long maritime heritage. In recent years a number of different organisations have provided marine education and training.

The Port Erin Marine Laboratory

The Isle of Man has a long history of the provision of marine education through the Port Erin Marine Laboratory which was in operation for 114 years.

The presence of a Marine Laboratory started in 1897 when the Liverpool Marine Biological Committee moved their laboratory from Puffin Island, in the Menai Strait, Wales to a small laboratory north of Port Erin Beach (variously known as Mortuary Beach, Aquarium Beach and Poyll Faa kee). In 1901 the Isle of Man Government assisted in funding the construction of a much larger new building which was completed in 1902. The Liverpool Marine Biological Committee actively used the laboratory for seventeen years and the annual report provides a detailed record of research results from the Committee’s work. They also produced detailed memoirs on species and groups that still provide a valuable insight and are available online through the Internet Archive online library: http://www.archive.org/search.php?query=creator%3A%22Liverpool+Marine+Biology+Committee%22

In 1919 Liverpool University took on the laboratory and it became the first place in the Britain to offer a degree in Marine Biology. Degrees and PhDs in Marine Biology, and teaching for students of other biological students at Liverpool University were offered right through to the closure of the laboratory in 2006.

At various times throughout its history, Port Erin Marine Laboratory offered training courses for the public as well as university students.

An overview of Port Erin Marine Laboratory’s work up into the early 1990s is given in Brand and Hawkins 1992.
The Department of Education and Children

Many schools in the Isle of Man incorporate marine education formally or informally in their teaching. Many Manx schools are involved in the Ecoschools programme, an international schools programme supporting sustainability. The programme has nine main topics: Energy, Water, Biodiversity, School Grounds, Healthy Living, Transport, Litter, Waste and Global Citizenship.

Marine education elements are often incorporated into special environmental activities like Green Weeks, Ecodays etc. Examples of special activities include a Marine Conference organised by Castle Rushen High School and a Green Awareness Day organised for Year 7 pupils at Ramsey Grammar School. Secondary Schools have been teaming up with the One World Centre and Agenda 21 to hold Green Days highlighting a variety of environmental issues.

From 2006 to 2009 the Department of Agriculture, Fisheries and Forestry, the Marine Conservation Society and local schools co-funded the visit of the Cool Seas Roadshow to most of the primary schools on the Isle of Man. The Roadshow introduced pupils to some of the protected marine species in Manx waters including basking sharks, turtles and Risso’s dolphins and their conservation importance.

There is an Isle of Man Government Strategic Aim: “Identity, Culture and Heritage – To foster an economic and social climate which supports the protection, promotion and participation in our unique cultural heritage.” (Isle of Man Government 2008). One of the Department of Education’s actions within this is: “Develop a skill-based curriculum for art, history and geography that enables greater focus on Manx identity, culture, heritage and the environment” DEC (2011).

More information about Manx schools and the Manx curriculum can be found at: http://www.gov.im/education/

For marine-specific areas, the following are included:

https://www2.sch.im/groups/manxcurriculum/wiki/de00d/Primary.html

Geography

https://www2.sch.im/groups/manxcurriculum/wiki/c22ed/Coasts__Coastlines__.html

Science

https://www2.sch.im/groups/manxcurriculum/wiki/c4c48/Coastal.html

https://www2.sch.im/groups/manxcurriculum/wiki/7f4ce/Marine.html
Also, in conjunction with the Department of Infrastructure, the 'EcoMann' site is organised into the nine topics areas of the Eco Schools programme, including marine-related components, to support the teaching of environmental issues within schools.

**Manx National Heritage**

Manx National Heritage plays a very important role in informing and educating the public about the Island’s natural heritage. The new Natural History Gallery of the Manx Museum in Douglas opened in 2005 and a large part of the gallery is dedicated to marine and coastal life. The Museum has also hosted workshops and training opportunities for local natural history enthusiasts and has actively promoted the understanding and appreciation of the Manx countryside and the coastal and marine environment through interpretation materials and events. The House of Manannan also includes information about marine and coastal wildlife in the interactive displays. Manx National Heritage has an Education Officer who organises educational activities for schools on a wide range of themes linked into the work of MNH, including natural history and biodiversity. They have also produced an education pack on Manx fisheries 1600-1990s which provides a valuable overview of the history of Manx fisheries and more recent developments:

The Manx Museum National Archive and Library is a valuable source of marine information and holds copies of many PhD theses and other research outputs from the Port Erin Marine Laboratory as well as historical fisheries reports and other marine records. The library also produces bibliographies on popular topics, summarising the information sources available. Bibliographies relevant to the marine and coastal environment are currently available on "Manx Coastal Erosion", "Manx Natural History” and "Manx Geology”:

**The Manx Wildlife Trust**

The Manx Wildlife Trust has been in operation since 1973 when it was established as the Manx Nature Conservation Trust. Environmental education has been an important part of the Trust’s work since its inception. The Trust currently employs a part time education...
officer who works closely with schools and other organisations as well as organising regular events for Manx Wildlife Trust Members and for the public. Education and awareness raising is also an important part of the role of the Trust’s Marine Officer. Marine events held by the Manx Wildlife Trust include regular rockpooling sessions throughout the summer on shores around the Island and their very successful annual Marine Weekend. The Marine Weekend evolved from a Marine Day with touch tanks and other marine attractions which was held for many years at the Port Erin Marine Laboratory, and now forms an integral part of the Queenie Festival in Port St Mary. The Manx Wildlife Trust has two regional groups – the Southern Group and Northern Group, which also organise public talks and other events which often have a marine theme.

The Manx Wildlife Trust has a Marine Committee which advises on the marine work of the Manx Wildlife Trust and co-ordinates events such as the Marine Weekend. Members of the Marine Committee hold a wealth of marine knowledge and are also consulted with on coastal and marine development issues. Members of the Manx Wildlife Trust and the umbrella organisation Manx Basking Shark Watch are actively involved in marine education and awareness raising and regularly give talks to the public and to organisations.

**The Department of Environment, Food and Agriculture (until 2010 the Department of Agriculture, Fisheries and Forestry)**

The Department of Environment, Food and Agriculture has a role in marine education and awareness raising and following the appointment of the first Marine Conservation Officer (now Marine Biodiversity Officer) in 2004, the Department has hosted regular marine seminars and also organised a wide range of training courses and other events.

Training courses have included a number of Cool Seas sessions to introduce primary school teachers to marine environmental education resources and marine issues in the Isle of Man, linking in to the visits of the Cool Seas Roadshow to many primary schools.

DEFA run occasional marine lectures and seminars for the public. The Department has also hosted Seasearch training courses for recreational divers, and WiSe training courses for wildlife friendly boat operation (see items later).

**Basking Sharks – A Global Perspective**

In 2009 the Department of Agriculture, Fisheries and Forestry and the Manx Wildlife Trust collaborated with international organisation Save our Seas to host the world’s first basking shark conference, Basking Sharks – a Global Perspective.
The conference was attended by delegates from Canada, USA, New Zealand, Norway, Seychelles, France, Belgium, Ireland, Scotland and England. There was also excellent Manx attendance, including local scientists, basking shark experts and enthusiasts, conservationists and students from local schools, the Isle of Man College and local students currently studying at University. A full week of local events and scientific sessions was held to ensure that local residents as well as delegates were able to participate. The conference closed with a determination to ensure that more is done to tackle accidental capture of basking sharks, to legally protect basking sharks in countries that do not yet have the legislation in place and to ensure that those countries which do protect basking sharks in law are working actively to protect them in practice. The abstract booklet for the conference is available from the Department of Environment, Food and Agriculture.

A Conference Audio Slide is available to view on YouTube at: [http://www.youtube.com/watch?v=Y89Y7CDn0ek](http://www.youtube.com/watch?v=Y89Y7CDn0ek).

**Fisheries Science for Fishermen - Marine Resource Education Programme**

In October 2011, the Fisheries Directorate of the Department of Environment, Food and Agriculture began a programme of fishermen’s training courses, the Marine Resource Education Programme, based on a similar initiative developed by the Gulf of Maine Research Institute, USA. The courses brought together fishermen from the Isle of Man, UK, Ireland, scientists and representatives of conservation organisations to learn about marine science and discuss fisheries management issues. In 2012 the course was accredited by the University of Liverpool Continuing Education Programme.

It is hoped that this course will become a regular occurrence, improving understanding of fisheries science and developing better communication between fishermen, scientists and fisheries managers.
Newsletters and Mailing Lists

The Department of Environment, Food and Agriculture produces a number of newsletters for the public:

There is an annual Biodiversity Matters newsletter produced by Biodiversity Officers: 

There is also a seafisheries newsletter (Fish Skeet)(as well as a freshwater newsletter) produced by the Fisheries Directorate:  

There is also a marine email list which keeps members up to date with marine news and events. For further information please see the Department’s website at: www.gov.im/defa/

The Isle of Man College of Further and Higher Education

The Isle of Man College offers the opportunity to study AS and A2-level Environmental Science. The curriculum has strong ecology and environmental management elements and the course also uses local examples of marine management as case studies with guest lectures from local marine biologists and marine managers.

As part of the degree in History and Heritage Management with Manx Studies offered by the Isle of Man College, one environmental module is offered “Evolution of the Manx Landscape”, which includes information about coastal habitats and geology and also a session on marine landscapes.

The Isle of Man International Business School (The IBS) was founded in 1999 and offers a range of undergraduate and postgraduate business degrees which are franchised from Liverpool John Moores University. The IBS has also developed a successful Professional Programmes division and offers a range of professional qualifications that compliment the growing portfolio of academic and short courses.

www.iomcollege.ac.im/.

The Centre for Manx Studies – Liverpool University

The Centre for Manx Studies is part of the School of Archaeology, Classics and Egyptology at the University of Liverpool and offers an MA in Manx Studies and the opportunity to study for a PhD in Manx Studies. The Centre also offers a range of Continuing Education opportunities in association with the Isle of Man Government Department of Education and Children. The "Know Your Island: Landscape and Environment" module is accredited through Liverpool University and introduces the Manx landscape and how it has been
formed and the influence of people on the landscape. It contains aspects of coastal and marine landscape.

A ten week evening class “An Introduction to Marine Conservation: Isle of Man and International” has been running since 2008 and is available as an assessed module, accredited by the University of Liverpool. This course combines an overview of Manx marine biology and conservation with a global view of the topic.

www.liv.ac.uk/manxstudies/.

Department of Infrastructure – Harbours Division

Crucial Crew

Crucial Crew events are organised by the Isle of Man Coastguard for children starting secondary school and provides a range of safety information including inland and coastal water safety information.

Crucial Crew events were first held in 1992 and over a five day period safety presentations and demonstrations from the IOM Coastguard, IOM Fire & Rescue Service, St John’s Ambulance, DOI Road Safety Team, Manx Electricity Authority and Manx Gas are given to around 800 children.

Over the years it has been well supported by schools and has proved to be an enjoyable and informative event.

Seasearch Isle of Man

Seasearch is a training and survey programme for recreational divers coordinated by the Marine Conservation Society in the UK. Training courses for Seasearch divers have been held in the Isle of Man since 2005 and there are approximately 40 local divers who are trained to Seasearch Observer level and an additional 5 divers who are trained to Seasearch Surveyor level. Since 2008 there has been an active volunteer Seasearch Co-ordinator for the Isle of Man and each year of the order of the order of 100 survey dives have been carried out, including dedicated surveys to support the Ramsey Marine Nature Reserve, assessing Fisheries Closed Areas and assisting with scientific studies. A number of identification talks and training activities have also been organised to support Seasearch divers.

www.seasearch.org.uk
A few of the many trained local Seasearch divers prior to a survey dive in the Ramsey Marine Nature Reserve.

For further information and for contact details of the local co-ordinator please see: www.seasearch.co.uk/.

**Manx Whale and Dolphin Watch**

Manx Whale and Dolphin Watch is a voluntary organisation which carries out marine research and awareness-raising focussing on marine mammals, and cetaceans in particular.

For further information on the work of Manx Whale and Dolphin Watch and findings please see MMEA Chapter (3.4a – Marine mammals).

**Outdoor Operators**

Through local outdoor providers such as sailing, diving and kayaking schools and clubs there are a range of opportunities to learn to learn new sports and develop marine skills with associated opportunities to learn about the marine environment.

For further information about opportunities in Manx waters please see MMEA Chapter 7.1 (Tourism and Recreation).

**The Isle of Man Queenie Festival**

The annual Isle of Man Queenie Festival started in 2008 and is run by a group of Port St Mary organisations and individuals, led by Island Seafare, the Port St Mary seafood processors and fishmongers. The event raises awareness of marine life and promotes Manx seafood and fisheries, with a focus on Manx Queenies. A highlight for visitors to the Queenie Festival are the touch tanks where local children and their families can get close to some of the varied marine animals that live in Manx waters.

The Isle of Man Queenie Festival website: http://queeniefestival.com/
The Isle of Man Natural History and Antiquarian Society

The Isle of Man Natural History and Antiquarian Society was established in 1879 and since then has organised regular field trips, meetings and lectures about Manx natural history and heritage. The Society played a significant role in the establishment of the Manx Museum in 1922 and the founder of the IOMNHAS, PMC Kermode, was the first director of the Manx Museum.

The Society produces a formal journal, *The Proceedings of the Isle of Man Natural History and Antiquarian Society*, currently published every 2 years. The Society’s programmes include lectures and excursions related the Manx coast and seas and recent papers in the Proceedings have included a review of the work of the Calf of Man Observatory by Kate Hawkins and a paper on saltmarsh ecology in the Isle of Man by Erica Spencer.

[www.manxantiquarians.com/](http://www.manxantiquarians.com/)

Manx Heritage Foundation

The Manx Heritage Foundation has a remit for supporting natural heritage research and education in addition to its main focus on cultural heritage. The Foundation funded the publication of an illustrated Isle of Man Rocky Shore Name Trail with English and Manx names for common marine species found on Manx shores. This guide was produced by the Field Studies Council and accompanies the Rocky Shore Pack, also produced by the Field Studies Council for the Department of Education and the Department of Agriculture, Fisheries and Forestry in 2006. The guide is a useful resource for exploring the Manx shore and is available for purchase at local bookshops and from the Manx Wildlife Trust.

[www.manxheritage.org/](http://www.manxheritage.org/)

Manx Birdlife

Manx Birdlife is a Manx charity dedicated to bird conservation and research. The organisation completed a coastal bird survey in 1999 and carried out seal surveys around the Manx coast in 2006 and 2007.

[http://manxbirdlife.im/](http://manxbirdlife.im/)

The Manx Ornithological Society

The Manx Ornithological Society holds regular lectures about birds and other aspects of the Manx environment, organises summer excursions and publishes the annual newsletter Peregrine which includes the annual Manx Bird Report.

Marine Industry Training

The Royal Institution of Naval Architects and The Institute of Marine Engineering, Science and Technology

– Isle of Man Joint Branch

The Royal Institution of Naval Architects and The Institute of Marine Engineering, Science and Technology are two major organisations representing between them Naval Architects, Marine Engineers, Scientists and Technologists in the UK and overseas.

A brief introduction to the organisations is provided in MMEA Chapter 6.2 (Shipping).

On the Isle of Man a Joint Branch of the two organisations operates. A programme of technical presentations commences during the winter with speakers from both the Island and the UK. The current technical programme for 2012/2013 features a diverse range of presentations directed towards engineers, scientists, technologists, industry and managers. Members of the general public are also welcome to attend.

For more information contact the Joint Branch Secretary Roy McLean roymclean@manx.net or the Joint Branch Chairman David Varley varley@enterprise.net, or see:

- www.rina.org.uk
- www.imarest.org

Ship Superintendent Training Course

Aspiring and newly appointed ship superintendents from the Island and abroad can receive accredited tuition on subjects relevant to the role of ship superintendent, here on the Island.

The accredited Ship Superintendent Training Course is primarily designed for recently appointed ship superintendents or aspiring entrants into the world of ship management or ship ownership - whether working for a ship owner or ship management company; or whether applying from a Deck, Engineering or Naval Architecture background. More experienced superintendents can also be accommodated.

This course is a joint initiative between the Isle of Man Ship Registry (Department of Economic Development) (www.iomshipregistry.com) and the Isle of Man International Business School (www.ibs.ac.im/ships- see item below) and is delivered by a wide range of industry experts.

The course was put together by staff from the Isle of Man Ship Registry, the Isle of Man International Business School, Bernhard Schulte Ship Management (IoM) (www.bs-shipmanagement.com) and the Döehle IOM Group (www.doehle-iom.com) and has been approved by IMAREST (the Institute of Marine Engineering, Science and Technology), the Nautical Institute and DNV (Det Norske Veritas).
The course is managed by EMCS International Limited (also based on the Isle of Man) and runs twice a year with an intensive nine day programme.

The course was first delivered in May 2006 and has since been a finalist in the Lloyds London Awards for "Best Training". As well as gaining a DNV accredited certificate, participants who complete the course also receive a certificate for 68 Continual Professional Development points.

For more information about EMCS International Limited please visit www.emcs.co.im. For more information about IMAREST, visit: www.imarest.org. For more information about the Nautical Institute, visit: www.nautinst.org. For more information about DNV, visit www.dnv.com.

**Other Organisations or Groups Promoting Marine Education or Awareness**

**Society for the Preservation of the Manx Countryside and Environment**

Garrad (1990) produced a comprehensive overview of the development of Manx conservation and the organisations involved which will be useful for those interested in the history of Manx conservation.

**Local Artists**

There is a strong artistic tradition on the Isle of Man. From John Miller Nicholson and William Hoggatt, to more recent artists such as Nancy Corkish, David Byre and Nicola Dixon, a strong marine theme often appears in their painting. These art works provide both current and historic perspectives and highlight the Manx marine environment through the general availability of their work, for example:

- Manx Museum (part of Manx National heritage)

Similarly, the advent of online tools such as the Manx Art Wiki (hosted by the Department of Education and Children [https://www2.sch.im/](https://www2.sch.im/)) allows teachers to access specific art works, including marine themed for teaching purposes.
